Country list

Yellow fever vaccination requirements and recommendations; and malaria situation

Introduction
The information provided for each country includes the country’s stated requirements for yellow fever vaccination, WHO recommendation for travellers regarding yellow fever vaccinations, and details concerning the malaria situation and recommended prevention of the disease.2,3

Yellow fever

Yellow fever vaccination
Yellow fever vaccination is carried out for two different purposes:

1. To prevent the international spread of the disease by protecting countries from the risk of importing or spreading the yellow fever virus. These are requirements established by the country.

The countries that require proof of vaccination2 are those where the disease may or may not occur and where the mosquito vector and potential non-human primate hosts of yellow fever are present. Any importation of the virus into such countries by infected travellers could result in its propagation and establishment, leading to a permanent risk of infection for the human population. Proof of vaccination is often required for travellers arriving from countries with risk of yellow fever transmission and sometimes for travellers in transit through such countries.

---

1 For the purpose of this publication, the terms “country” and “countries” cover countries, territories and areas.

2 Please note that the requirements for vaccination of infants over 6 months of age by some countries are not in accordance with WHO’s advice (Chapter 6). Travellers should, however, be informed that the requirement exists for entry into the countries concerned.

3 WHO publishes these requirements for informational purposes only; this publication does not constitute an endorsement or confirmation that such requirements are in accordance with the provisions of the International Health Regulations.
A meeting of yellow fever experts organized in 2010 proposed that under 12 h of airport transit the risk of yellow fever is almost non-existent and therefore that a proof of vaccination might not be necessary. This information is being provided to WHO Member States, but travellers are recommended to consult individual country requirements by contacting the embassy(ies) of the country(ies) they intend to visit. It should be noted that some countries require proof of vaccination from all travellers.

Countries requiring yellow fever vaccination for entry do so in accordance with the International Health Regulations. Country requirements are subject to change at any time. Updates can be found at: http://www.who.int/ith. This chapter contains information on yellow fever requirements as provided by countries.

The fact that a country has no requirement for yellow fever vaccination does not imply that there is no risk of yellow fever transmission.

2. To protect individual travellers who may be exposed to yellow fever infection.

The risk of yellow fever transmission depends on the presence of the virus in the country in humans, mosquitoes or animals. As yellow fever is frequently fatal for those who have not been vaccinated, vaccination is recommended for all travellers (with few exceptions, Chapter 6) visiting areas where there is a risk of yellow fever transmission.

WHO determines those areas where “a risk of yellow fever transmission is present” on the basis of the diagnosis of cases of yellow fever in humans and/or animals, the results of yellow fever sero-surveys and the presence of vectors and animal reservoirs.4

Decisions regarding the use of yellow fever vaccine for travellers must weigh several factors, including the risk of travel-associated yellow fever virus disease, country requirements, and the potential for serious adverse events following yellow fever vaccination (Chapter 6).

---

4 More extensive descriptions of the classifications that define areas with risk of yellow fever virus transmission can be found at http://www.who.int/ith/YFrisk.pdf. These classifications inform the vaccine recommendations listed here.
The table below summarizes WHO’s revised recommendations for yellow fever vaccination for travellers.

<table>
<thead>
<tr>
<th>Yellow fever vaccination category</th>
<th>Rationale for recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recommended</td>
<td>Yellow fever vaccination is recommended for all travellers ≥9 months old in areas where there is evidence of persistent or periodic yellow fever virus transmission.</td>
</tr>
<tr>
<td>Generally not recommended</td>
<td>Yellow fever vaccination is <em>generally not recommended</em> in areas where there is low potential for yellow fever virus exposure (no human yellow fever cases ever reported and evidence to suggest only low levels of yellow fever virus transmission in the past). However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to mosquitoes or unable to avoid mosquito bites. When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g. age, immune status) for serious vaccine-associated adverse events.</td>
</tr>
</tbody>
</table>

Annex 1 provides a summary list of countries with risk of yellow fever transmission in whole or in part, as well as a list of countries that require proof of yellow fever vaccination as a condition for entry.

**Other diseases**

*Cholera.* No country reports a requirement for a certificate of vaccination against cholera as a condition for entry. For information on selective use of cholera vaccines, Chapter 6.

*Smallpox.* Since the global eradication of smallpox was certified in 1980, WHO does not recommend smallpox vaccination for travellers.

*Other infectious diseases.* Information on the main infectious disease threats for travellers, their geographical distribution, and corresponding precautions are provided in Chapter 5. Chapter 6 provides information on vaccine-preventable diseases.
Malaria

General information about malaria, its geographical distribution and details of preventive measures are included in Chapter 7. Protective measures against mosquito bites are described in Chapter 3. Specific information for each country is provided in this section, including epidemiological details for all countries with malarious areas (geographical and seasonal distribution, altitude, predominant species, reported resistance). The recommended prevention is also indicated. For each country, recommended prevention is decided on the basis of the following factors: the risk of contracting malaria; the prevailing species of malaria parasites in the area; the level and spread of drug resistance reported from the country; and the possible risk of serious side-effects resulting from the use of the various prophylactic drugs. Where *Plasmodium falciparum* and *P. vivax* both occur, prevention of falciparum malaria takes priority. Unless the malaria risk is defined as due “exclusively” to a certain species (*P. falciparum* or *P. vivax*), travellers may be at risk of any of the parasite species, including mixed infections.

The numbers I, II, III and IV refer to the type of prevention based on the table below.

<table>
<thead>
<tr>
<th>Malaria risk</th>
<th>Type of prevention</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type I</td>
<td>Very limited risk of malaria transmission</td>
</tr>
<tr>
<td>Type II</td>
<td>Risk of <em>P. vivax</em> malaria only; or fully chloroquine-sensitive <em>P. falciparum</em></td>
</tr>
<tr>
<td>Type III&lt;sup&gt;a&lt;/sup&gt;</td>
<td>Risk of <em>P. vivax</em> and <em>P. falciparum</em> malaria transmission, combined with emerging chloroquine resistance</td>
</tr>
<tr>
<td>Type IV</td>
<td>(1) High risk of <em>P. falciparum</em> malaria, combined with reported antimalarial drug resistance; or (2) Moderate/low risk of <em>P. falciparum</em> malaria, combined with reported high levels of drug resistance&lt;sup&gt;b&lt;/sup&gt;</td>
</tr>
</tbody>
</table>

---

<sup>a</sup> The areas where Type III prevention is still an option are parts of Colombia and India, Nepal, Sri Lanka and Tajikistan. If needed, Type IV prevention can be used instead.

<sup>b</sup> Alternatively, when travelling to rural areas with multidrug-resistant malaria and only a very low risk of *P. falciparum* infection, mosquito bite prevention can be combined with stand-by emergency treatment.
AFGHANISTAN

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Malaria risk – P. falciparum and P. vivax – exists from May to November inclusive below 2000 m. P. falciparum resistant to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention in risk areas: IV

ALBANIA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

ARGENTINA

Yellow fever
Country requirement: no

Recommended prevention: yes

Yellow fever vaccine recommendation: no

Yellow fever vaccination is generally not recommended in areas where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to yellow fever virus (e.g. prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g. age, immune status) for serious vaccine-associated adverse events.

1 Yellow fever vaccination is generally not recommended in areas where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to yellow fever virus (e.g. prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g. age, immune status) for serious vaccine-associated adverse events.
ments in the following provinces, where altitudes are <2300 m: Formosa (all departments), Chaco (Bermejo) Jujuy (Ledesma, San Pedro, Santa Bárbara, Valle Grande), and Salta (Anta, General José de San Martín, Oran, Rivadavia) (Map).

Not recommended for travellers whose itineraries are limited to areas at altitudes >2300 m and all provinces and departments not listed above.

Malaria: Malaria risk due exclusively to *P. vivax* is very low and is confined to rural areas along the borders with Plurinational State of Bolivia (lowlands of Salta province) and with Paraguay (lowlands of Chaco and Misiones provinces).

Recommended prevention in risk areas: II

ARMENIA
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

AUSTRALIA
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age entering Australia within 6 days of having stayed overnight or longer in a country with risk of yellow fever transmission, excluding Galapagos Islands in Ecuador and limited to Misiones province in Argentina, but including Sao Tome and Príncipe, Somalia and the United Republic of Tanzania.
Yellow fever vaccine recommendation: no

AUSTRIA
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

AZERBAIJAN
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

Malaria: Malaria risk due exclusively to *P. vivax* exists from June to October inclusive in lowland areas, mainly in the area between the Kura and Arax rivers. There is no malaria transmission in Baku city (the capital city). Four locally acquired cases were reported in 2011.
Recommended prevention in risk areas: I

AZORES see PORTUGAL

BAHAMAS
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Sporadic local transmission of *P. falciparum* has been reported in recent years on Great Exuma island only, subsequent to international importation of parasites. No risk on other islands.
Recommended prevention on Great Exuma: I (mosquito bite prevention only)

BAHRAIN
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

BANGLADESH
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Malaria risk exists throughout the year, but transmission occurs only in rural areas, in 13 of 64 districts. The risk is high in Chittagong Hill Tract districts (Bandarban, Rangamati and Khagrachari), Chittagong district and Cox Bazaar district. Low risk exists in the districts of Hobigonj, Kurigram, Moulvibazar, Mymensingh, Netrakona, Sherpur, Sunamgonj and Sylhet. Most parts of the country, including Dhaka City, have no risk of malaria. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported.
Recommended prevention in risk areas: IV

BARBADOS
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission except Guyana and Trinidad and
Tobago and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**BELARUS**

**Yellow fever**

Country requirement: no

Yellow fever vaccine recommendation: no

**BELGIUM**

**Yellow fever**

Country requirement: no

Yellow fever vaccine recommendation: no

**BELIZE**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Bhutan**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers arriving from countries with risk of yellow fever transmission and for all travellers having transited through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**BOLIVIA (PLURINATIONAL STATE OF)**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

**Recommended** for all travellers aged 9 months of age and over travelling to the following area east of the Andes at altitudes below 2300 m: the entire departments of Beni, Pando, and Santa Cruz, and designated areas (Map) of Chuquisaca, Cochabamba, La Paz and Tarija.

Not recommended for travellers whose itineraries are limited to areas at altitudes above 2300 m and all areas not listed above, including the cities of La Paz and Sucre.

**Malaria:** Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention: IV

**BOLIVIA (PLURINATIONAL STATE OF)**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk due predominantly to *P. vivax* exists throughout the year in the whole country below 2500 m. Falciparum malaria occurs in Santa Cruz and in the northern departments of Beni and Pando, especially in the localities of Guayaramerín and Riberaltta. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention in risk areas: II; in Beni, Pando and Santa Cruz: IV
BOSNIA AND HERZEGOVINA
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

BOTSWANA
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from or having passed through countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no
Malaria: Malaria risk due predominantly to *P. falciparum* exists from November to May/June in the northern parts of the country: Bobirwa, Boteti, Chobe, Ngamiland, Okavango, Tutume districts/sub-districts. Chloroquine-resistant *P. falciparum* reported.
Recommended prevention in risk areas: IV

BRITISH VIRGIN ISLANDS
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

BRUNEI DARUSSALAM
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

BULGARIA
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

BURKINA FASO
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from all travellers over 1 year of age. Malaria also occurs on the periphery of large cities such as Ouagadougou, Bobo-Dioulasso and Yako. Multidrug-resistant *P. falciparum* reported. *P. vivax* resistance to chloroquine reported.
Recommended prevention in risk areas: IV

BULGARIA
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

BURMA see MYANMAR

**COUNTRY LIST: YELLOW FEVER VACCINATION REQUIREMENTS AND RECOMMENDATIONS**

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine-pyrimethamine reported.
Recommended prevention: IV

Malaria in the United States:

Yellow Fever:

Country requirement: no
Yellow fever vaccine recommendation: no

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine-pyrimethamine reported.
Recommended prevention: IV

Malaria in the United States:
BURUNDI

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from all travellers over 1 year of age.
Yellow fever vaccine recommendation: yes

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.
Recommended prevention: IV

CAMBODIA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

Malaria: Malaria risk due to *P. falciparum* and *P. vivax* exists throughout the year in all forested rural areas, including coastal areas. Phnom Penh and areas close to Tonle Sap (Siem Reap) are not at risk. Risk within the tourist area of Angkor Wat is negligible. *P. falciparum* resistance to chloroquine and sulfadoxine–pyrimethamine has been reported throughout the country. *P. falciparum* resistance to artemether, mefloquine, lumefantrine and piperaquine has been reported in western Cambodia. *P. vivax* resistance to chloroquine has been reported in eastern Cambodia.
Recommended prevention in risk areas: IV (atovaquone-proguanil or doxycycline)

CENTRAL AFRICAN REPUBLIC

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers arriving from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: yes

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.
Recommended prevention: IV

CHAD

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers arriving from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: yes

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.
Recommended prevention: IV

CANARY ISLANDS see SPAIN

CAPE VERDE

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

Malaria: Limited malaria risk due predominantly to *P. falciparum* exists from August to November inclusive in Santiago island and in Boa Vista island (18 locally acquired cases reported in 2010).
Recommended prevention in risk areas: I

CAYMAN ISLANDS

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

CANADA

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no
CHILE

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

CHINA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 9 months of age arriving from countries with risk of yellow fever transmission and for all travellers having transited through the airport of a country with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

Malaria: Malaria risk, including *P. falciparum* malaria, exists in Yunnan and to a lesser extent in Hainan. *P. falciparum* resistance to chloroquine and sulfadoxine–pyrimethamine reported. Limited risk of *P. vivax* malaria exists in southern and some central provinces, including Anhui, Ghuizhou, Henan, Hubei, Jiangsu. There is no malaria risk in urban areas.
Recommended prevention in risk areas: II; in Hainan and Yunnan, IV

CHINA, HONG KONG SAR

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

Same requirements as mainland Australia.
Yellow fever vaccine recommendation: no

COLOMBIA

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: yes

Recommended for all travellers aged 9 months or over travelling to the following departments at altitudes below 2300 m (Map): Amazonas, Antioquia, Arauca, Atlántico, Bolivar, Boyacá, Caldés, Caquetá, Casanare, Cauca, Cesar, Córdoba, Cundinamarca, Guainía, Guaviare, Huila, Magdalena, Meta, Norte de Santander, Putumayo, Quindío, Risaralda, San Andrés and Providencia, Santander, Sucre, Tolima, Vaupés, Vichada, Choco (only the municipalities of Acandi, Juradó, Riosucio, and Ungía), and La Guajira (only the municipalities of Albayín, Barrancas, Dibulla, Distacción, El Molino, Fonseca, Hatonuevo, La Jagua del Pillar, Maicao, Manaua, Rionchaca, San Juan del Cesar, Urumita, and Villanueva).

Generally not recommended for travellers whose itineraries are limited to the following areas west of the Andes at altitudes below 2300 m: the departments of Cauca, Nariño and Valle de Cauca, central and southern Choco, and the cities of Barranquilla, Cali, Cartagena and Medellín (Map).
Not recommended for travellers whose itineraries are limited to all areas above 2300 m, including the city of Bogotá and the municipality of Urbina in La Guajira department.

Malaria: Malaria risk – *P. vivax* (72%), *P. falciparum* (27%) – is high throughout the year in rural/jungle areas below 1600 m, especially in municipalities of the regions of Amazonia, Orinoquiá, Pacífico and Urabá-Bajo Cauca. Transmission intensity varies by department, with the highest risk in Amazonas, Antioquia, Chocó, Córdoba, Guaviare, La Guajira, Nariño and Vichada. Chloroquine-resistant *P. falciparum* exists in Amazonia, Pacífico and Urabá-Bajo Cauca. Resistance to sulfadoxine–pyrimethamine reported.
Recommended prevention in risk areas: III; in Amazonia, Pacífico and Urabá-Bajo Cauca: IV

COMOROS

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the

---

1 Yellow fever vaccination is generally not recommended in areas where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to yellow fever virus (e.g. prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g. age, immune status) for serious vaccine-associated adverse events.

COUNTRY LIST: YELLOW FEVER VACCINATION REQUIREMENTS AND RECOMMENDATIONS

**Malaria:** Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention: IV

**DENMARK**

*Yellow fever*

Country requirement: no

Yellow fever vaccine recommendation: no

**DJIBOUTI**

*Yellow fever*

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

*Malaria:* Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention: IV

**DOMINICA**

*Yellow fever*

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**DOMINICAN REPUBLIC**

*Yellow fever*

Country requirement: no

Yellow fever vaccine recommendation: no

*Malaria:* Malaria risk due exclusively to *P. falciparum* exists throughout the year, especially in the western provinces of Dajabón, Elias Pina and San Juan. Risk in other areas is low to negligible. There is no evidence of *P. falciparum* resistance to any antimalarial drug.

Recommended prevention in risk areas: II

**ECUADOR**

*Yellow fever*

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission. Nationals and residents of Ecuador are required to possess certificates of vaccination on their departure to an area with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

*Recommended for all travellers aged 9 months or over travelling to the following provinces east of the Andes at altitudes below 2300 m: Morona-Santiago, Napo, Orellana, Pastaza, Sucumbios and Zamora-Chinchipe (Map).*

*Generally not recommended* for travellers whose itineraries are limited to the following provinces west of the Andes and at altitudes below 2300 m: Esmeraldas, Guayas, Los Ríos and Manabí, and designated areas of Azuay, Bolívar, Canar, Carchi, Chimborazo, Cotopaxi, El Oro, Imbabura, Loja, Pichincha and Tungurahua (Map).

*Not recommended* for travellers whose itineraries are limited to all areas above 2300 m altitude, the cities of Guayaquil and Quito, and the Galápagos Islands (Map).

*Malaria:* Malaria risk – *P. vivax* (87%), *P. falciparum* (13%) – exists throughout the year below 1500 m, with moderate transmission risk in coastal provinces. There is no risk in Guayaquil, Quito and other cities of the inter-Andean region. *P. falciparum* resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention in risk areas: IV

**EGYPT**

*Yellow fever*

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

All arrivals from Sudan are required to possess either a vaccination certificate or a location certificate issued by a Sudanese official centre stating that they have not been in Sudan south of 15°N within the previous 6 days.

Yellow fever vaccine recommendation: no

---

1 Yellow fever vaccination is generally not recommended in areas where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to yellow fever virus (e.g. prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g. age, immune status) for serious vaccine-associated adverse events.
Malaria: Very limited *P. falciparum* and *P. vivax* malaria risk may exist from June to October inclusive in El Faiyum governorate (no indigenous cases reported since 1998). Recommended prevention: none

**EL SALVADOR**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required from travellers aged between 1 and 60 years arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk due almost exclusively to *P. vivax* exists in rural areas of migratory influence from Guatemala. Sporadic *vivax* malaria cases are reported from other parts of the country. Recommended prevention in risk areas: I

**EQUATORIAL GUINEA**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required from travellers arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

**Malaria:** Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention: IV

**ERITREA**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required from travellers arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: in general, no

Generally not recommended¹ for travellers going to the following states: Anseba, Debub, Gash Barka, Mae Kel and Semenawi Keih Bahri.

¹ Yellow fever vaccination is generally not recommended in areas where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to yellow fever virus (e.g., prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g., age, immune status) for serious vaccine-associated adverse events.

Not recommended for all other areas not listed above, including the islands of the Dahlak Archipelagos (Map).

**Malaria:** Malaria risk – *P. falciparum* and *P. vivax* – exists throughout the year in the whole country below 2200 m. There is no risk in Asmara. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention in risk areas: IV

**ESTONIA**

**Yellow fever**
Country requirement: no

Yellow fever vaccine recommendation: no

**ETHIOPIA**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

Recommended for all travellers aged 9 months or over, except as mentioned below.

Generally not recommended¹ for travellers whose itineraries are limited to the Afar and Somali provinces (Map).

**Malaria:** Malaria risk – approximately 60% *P. falciparum*, 40% *P. vivax* – exists throughout the year in the whole country below 2000 m. *P. falciparum* resistance to chloroquine and sulfadoxine–pyrimethamine reported. *P. vivax* resistance to chloroquine reported. There is no malaria risk in Addis Ababa.

Recommended prevention in risk areas: IV

**FALKLAND ISLANDS (MALVINAS)**

Recommended prevention in risk areas: IV

1 Yellow fever vaccination is generally not recommended in areas where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to yellow fever virus (e.g., prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g., age, immune status) for serious vaccine-associated adverse events.

SAINT KITTS AND NEVIS
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

SAINT LUCIA
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

SAINT PIERRE AND MIQUELON
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

SAINT VINCENT AND THE GRENADINES
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

SAMOA
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

SAN MARINO
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

SAO TOME AND PRINCIPE
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from all travellers over 1 year of age.
Yellow fever vaccine recommendation: no
Generally not recommended for travellers to Sao Tome and Principe.
Malaria: Malaria risk due predominantly to P. falciparum exists throughout the year. Chloroquine-resistant P. falciparum reported.
Recommended prevention: IV

SAUDI ARABIA
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from all travellers arriving from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no
Malaria: Limited malaria risk due predominantly to P. falciparum exists mainly from September to January inclusive in foci along the southern border with Yemen (except in the high altitude areas of Asir Province). No risk in Mecca or Medina cities. Chloroquine-resistant P. falciparum reported.
Recommended prevention in risk areas: IV

1 Yellow fever vaccination is generally not recommended in areas where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to yellow fever virus (e.g., prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g., age, immune status) for serious vaccine-associated adverse events.
SENEGAL

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 9 months of age arriving from countries with risk of yellow fever transmission and for all travellers having transited through the airport of a country with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. There is less risk from January to June inclusive in the central western regions. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.
Recommended prevention: IV

SLOVAKIA

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

SLOVENIA

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

SOLOMON ISLANDS

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers arriving from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year except in a few outlying eastern and southern islands. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported. *P. vivax* resistance to chloroquine reported.
Recommended prevention in risk areas: IV

SOMALIA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers arriving from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

*Generally not recommended* for travellers going to the following regions: Bakool, Banaadir, Bay, Gado, Galgadud, Hiran, Lower Juba, Middle Juba, Lower Shabelle and Middle Shabelle (Map).

1 Yellow fever vaccination is generally not recommended in areas where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to yellow fever virus (e.g., prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g., age, immune status) for serious vaccine-associated adverse events.
Not recommended for all other areas not listed above.

**Malaria:** Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Risk is relatively low and seasonal in the north. It is higher in the central and southern parts of the country. Resistance to chloroquine and sulfadoxine-pyrimethamine reported.

Recommended prevention: IV

**SOUTH AFRICA**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission, from Eritrea, Sao Tome and Principe, Somalia, the United Republic of Tanzania, Zambia, and for all travellers having transited through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk due predominantly to *P. falciparum* exists throughout the year in the low-altitude areas of Mpumalanga Province (including the Kruger National Park), Limpopo Province and north-eastern KwaZulu-Natal as far south as the Tugela River. Risk is highest from October to May inclusive. Resistance to chloroquine and sulfadoxine-pyrimethamine reported.

Recommended prevention in risk areas: IV

**SOUTH SUDAN**

**Yellow fever**

Country requirement: no

Yellow fever vaccine recommendation: yes

**Malaria:** Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Risk is low and seasonal in the north. It is higher in the central and southern parts of the country. Malaria risk on the Red Sea coast is very limited. Resistance to chloroquine and sulfadoxine-pyrimethamine reported.

Recommended prevention: IV

**SPAIN**

**Yellow fever**

Country requirement: no

Yellow fever vaccine recommendation: no

**SRI LANKA**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

**Malaria:** Malaria risk – *P. falciparum* (40%), *P. vivax* (58%), mixed infections 2% – continues to decrease in recent years. It occurs throughout the year in the interior of the country beyond the coastal savannah area, with highest risk mainly along the eastern border and in gold-mining areas. In Paramaribo city and the other seven coastal districts, transmission risk is low or negligible.
P. falciparum resistant to chloroquine, sulfadoxine-pyrimethamine and mefloquine reported. Some decline in quinine sensitivity also reported. Recommended prevention in risk areas: IV

SWAZILAND
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers arriving from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no
Malaria: Malaria risk due predominantly to P. falciparum exists throughout the year in all low veld areas (mainly Big Bend, Mhlume, Simunye and Tshaneini). Chloroquine-resistant P. falciparum reported. Recommended prevention in risk areas: IV

SWEDEN
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

SWITZERLAND
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

SYRIAN ARAB REPUBLIC
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 6 months of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no
Malaria: Very limited malaria risk due exclusively to P. vivax may exist from May to October inclusive in foci along the northern border, especially in rural areas of El Hasaka Governorate (no indigenous cases reported since 2005). Recommended prevention: none

TAJIKISTAN
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

THAILAND
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission and for all travellers having transited through the airport of a country with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no
Malaria: Malaria risk exists throughout the year in rural, especially forested and hilly areas of the country, mainly towards the international borders, including the southernmost provinces. There is no risk in cities (e.g. Bangkok, Chiang Mai city, Pattaya); urban areas, Samui island and the main tourist resorts of Phuket island. However, there is a risk in some other areas and islands. P. falciparum resistant to chloroquine and sulfadoxine-pyrimethamine reported. Resistance to mefloquine and to quinine reported from areas near the borders with Cambodia and Myanmar. Artemisinin resistance reported near the border with Myanmar. P. vivax resistance to chloroquine reported. Human P. knowlesi infection reported. Recommended prevention in risk areas: I; in areas near Cambodia and Myanmar borders: IV

THE FORMER YUGOSLAV REPUBLIC OF MACEDONIA
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

TIMOR-LESTE
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission. Yellow fever vaccine recommendation: no
Malaria: Malaria risk due predominantly to P. vivax exists from June to October inclusive, particularly in southern areas (Khatlon Region), and in some central (Dushanbe), western (Gorno-Badakhshan), and northern (Leninabad Region) areas. P. falciparum resistant to chloroquine and sulfadoxine-pyrimethamine reported in the southern part of the country. Recommended prevention in risk areas: IV
of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported. Recommended prevention: IV

**TOGO**

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from all travellers over 1 year of age.

Yellow fever vaccine recommendation: yes

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Chloroquine-resistant *P. falciparum* reported. Recommended prevention: IV

**TUVALU**

(Non-self-governing territory of New Zealand)
Same requirements as New Zealand.

**TURKEY**

Yellow fever
Country requirement: no

Yellow fever vaccine recommendation: no

**TURKMENISTAN**

Yellow fever
Country requirement: no

Yellow fever vaccine recommendation: no

**UGANDA**

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

Recommended for all travellers aged 9 months or over travelling to the island of Trinidad, except as mentioned below.

**PORT OF SPAIN**

Yellow fever vaccination is generally not recommended in areas where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to yellow fever virus (e.g. prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites).

When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g. age, immune status) for serious vaccine-associated adverse events.

Port of Spain, cruise ship passengers who do not disembark from the ship, and aeroplane passengers in transit. Not recommended for travellers whose itineraries are limited to the island of Tobago.

**TUNISIA**

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**TUNISIA**

Yellow fever
Country requirement: no

Yellow fever vaccine recommendation: no

**Malaria**: Limited malaria risk due exclusively to *P. vivax* exists from May to October inclusive in the following provinces: Diyarbakır, Mardin and Şanlıurfa. A few sporadic cases were reported in 2010 and 2011. There is no malaria risk in the main tourist areas in the west and south-west of the country.

Recommended prevention in risk areas: II

**TURKMENISTAN**

Yellow fever
Country requirement: no

Yellow fever vaccine recommendation: no

**TUVALU**

Yellow fever
Country requirement: no

Yellow fever vaccine recommendation: no

**UGANDA**

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country, including the main towns of Fort Portal, Jinja, Kampala, Kigezi and Mbale. Resistance
to chloroquine and sulfadoxine–pyrimethamine reported.

**Recommended prevention:** IV

### UKRAINE

---

1 Yellow fever vaccination is generally **not recommended** in countries where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to those areas, who are at increased risk of exposure to yellow fever virus (e.g., prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g., age, immune status) for serious vaccine-associated adverse events.

### URUGUAY

**Yellow fever**
- Country requirement: **Recommended** for travellers arriving from countries with risk of yellow fever transmission.
- Yellow fever vaccine recommendation: no

### UZBEKISTAN

**Yellow fever**
- Country requirement: no
- Yellow fever vaccine recommendation: no

**Malaria:** Limited malaria risk due exclusively to *P. falciparum* exists from June to October inclusive in some villages located in the southern and eastern parts of the country bordering Afghanistan, Kyrgyzstan and Tajikistan.

**Recommended prevention in risk areas:** I

### VANUATU

**Yellow fever**
- Country requirement: no
- Yellow fever vaccine recommendation: no

### VENEZUELA (BOLIVARIAN REPUBLIC OF)

**Yellow fever**
- Country requirement: yes
- Yellow fever vaccine recommendation: **Recommended** for all travellers aged 9 months or over, except as mentioned below.

**Malaria:** Low to moderate malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported, *P. vivax* resistant to chloroquine reported.

**Recommended prevention:** IV

**Malaria:** Malaria risk due to *P. vivax* (75%) and *P. falciparum* (25%) is moderate to high throughout the year in some rural areas of Amazonas, Anzoátegui, Bolivar and Delta Amacuro states.

---

1 Yellow fever vaccination is generally **not recommended** in countries where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to those areas, who are at increased risk of exposure to yellow fever virus (e.g., prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g., age, immune status) for serious vaccine-associated adverse events.
There is low risk in Apure, Monagas, Sucre and Zulia. Risk of *P. falciparum* malaria is mostly restricted to municipalities in jungle areas of Amazonas (Alto Orinoco, Atabapo, Atures, Autana, Manapiare) and Bolivar (Cedeño, El Callao, Heres, Gran Sabana, Piar, Raul Leoni, Rocío, Sifontes and Sucre). *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention: IV in *P. falciparum* risk areas

**VIETNAM**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria**: Malaria risk due predominantly to *P. falciparum* exists in the whole country, excluding urban centres, the Red River delta, the Mekong delta, and the coastal plain areas of central Viet Nam. High-risk areas are the highland areas below 1500 m south of 18°N, notably in the four central highlands provinces Dak Lak, Dak Nong, Gia Lai and Kon Tum, Binh Phuoc province, and the western parts of the coastal provinces Khanh Hoa, Ninh Thuan, Quang Nam and Quang Tri. Resistance to chloroquine, sulfadoxine–pyrimethamine and mefloquine reported.

Recommended prevention in risk areas: IV

**ZAMBIA**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: in general, no

Generally not recommended¹ for travellers going to the following areas: the entire North West and Western provinces

Not recommended in all other areas not listed above.

**Malaria**: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country, including Lusaka. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention: IV

**ZIMBABWE**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria**: Malaria risk due predominantly to *P. falciparum* exists from November to June inclusive in areas below 1200 m and throughout the year in the Zambezi valley. In Bulawayo and Harare, the risk is negligible. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention in risk areas: IV

¹ Yellow fever vaccination is generally not recommended in areas where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to yellow fever virus (e.g. prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g. age, immune status) for serious vaccine-associated adverse events.
